

# Algorithm exercise

You will start this activity with the image in the bottom left hand corner of this sheet. That is where you will start retelling the story and creating your own algorithm. You will need to draw an arrow in each box connecting the events. Some events will be connected by arrows pointing up or down. Some events will be connected by arrows pointing to the right or left.

*Parents/Teachers: As you read or walk your children through the story, you can encourage them to connect the events with the fewest number of steps.*
